# CLEANING REPAIR REFINISH

WITH OUR PATENT PENDING NEW  
PROCESS WE RESTORE COMPOSITE  
FAN BLADES FOR COOLING TOWERS  
TO 'NEW'.

## An innovative new company has hit the scene!

We specialize in a revolutionary new process that will restore composite fan blades for cooling towers. And, with a regular maintenance program, they stay that way.

By being able to restore the blades without altering balance while they are still in position, we save you money by reducing down time. The blades never have to be removed!

Our new process is used in a variety of applications, cooling towers, chillers, spare blades...anything made of composites that is exposed to the elements.

Typically, our process costs about half of the price of the parts ALONE. You don't have to worry about the labor costs involved in removing the blades or down time!

Our process works anywhere. In the Deep South, in the Frigid North, where ever YOU need it to. Contact us for an evaluation, today!

55 W Federal Hwy  
Roscommon, MI 48653
